## HOW TO UPDATE YOUR CAMERAS FIRMWARE

1. Download the .bin Firmware file from our support page. FWT03.bin. Please note that .bin file name is the same for the CF-I and CR-I cameras, but the content is unique for each so be sure to download from the correct link for your camera
2. Insert the micro SD into your computer and open it to the first page (called the root level)
3. Copy the FWT03.bin into the root level of your Micro SD card – beside the BIKEDV. (The file name should match the FWT03.bin name exactly). Example below

BIKEDV

FWT03.bin

4. Safely eject your SD card from your computer.
5. Place the SD card into you CF/CR-I Camera and power on. Please wait for it to automatically update itself. The CR-I the top red Led will flash and the CF-I the white LED will flash erratically for a short while, then settle into normal switch on operation/sequence once the update is complete.
6. Now navigate to the settings menu in the App and check the firmware version to ensure the firmware has been successfully updated to T03-20210805V1.0 the current firmware version
7. Finally once updated successfully delete the .bin file from the sd card otherwise the camera will update every time you power it on

## Thank you for choosing Techalogic

If you have any questions regarding the operation of your camera, please don't hesitate to contact us and we will be more than happy to assist you.
